

Checklist für Diamond DA40 NG

Edition #: **20.1** Edition date: **10.11.2020**

Please observe:

The file you are receiving hereby combines all three sections of the checklist: Normal Checklist, Emergency Checklist and Abnormal Checklist.

All pages of a new edition will have the same new "edition #" and "edition date", even if only one page was amended and all other pages still have the same, unchanged content.

Therefore the "List of Effective Pages" (LEP) is provided. It is here where you can see whether a particular page was amended. Pages which have been amended by a new edition will be marked **yellow**. For all other pages you will see which original "edition #" (and of course any higher "edition #") is still valid.

Note:

The system of assigning "Edition #" is as follows:

- if the revision affects all types, a new edition # (without a decimal figure) will be assigned to all of the checklists
- if the revision does not affect all types, the affected checklists will get subsequent "decimal figures" until a major revision affecting all checklists is issued.

Have a lot of nice flights and happy landings!

Peter Schmidleitner

Remark: after landing the clearing procedure for "ECU FAIL ON GROUND" may be used.

**ECU A AND B FAIL
SIMULTANEOUSLY****DURING FLIGHT**

- Go to **Emergency Ckl page 4** ENGINE TROUBLESHOOTING

FUEL LOW

- Fuel transfer pump: ON
- Check fuel quantity
- Avoid uncoordinated flight
 - If light still ON:
 - ⇒ Expect fuel leak
 - ⇒ Fuel valve to EMERGENCY
 - ⇒ Fuel transfer pump OFF
 - ⇒ Be prepared for emergency landing

VOLTS LOW**BUS VOLTAGE TOO LOW**

Remark: possible reason is a fault in the electrical power supply

- ❖ → On ground
 - ⇒ Terminate flight preparation
- ❖ In flight
 - ⇒ Check circuit breakers
 - ⇒ Switch off unnecessary electrical equipment
 - If light still ON:
 - Apply "ALTERNATOR FAIL"-emergency procedure
(Emergency Checklist page 7)

PITOT FAIL**PITOT HEATING SYSTEM FAILED**

- check pitot heat ON
 - If in icing conditions
 - ⇒ expect loss of airspeed indication
 - ⇒ leave area with icing conditions

COOL LVL**ENGINE COOLANT LEVEL LOW**

- Monitor annunciators and instruments
- Check „Coolant temperature“ procedure, page 16

INDICATIONS OUTSIDE OF GREEN RANGE**RPM high**

Yellow range is permitted for up to 5 minutes if required

- Reduce power
- Keep RPM in green range using the power lever
 - If problem not solved
 - ⇒ Go to „RPM overspeed“ procedure,
Emergency Checklist page 5
 - ⇒ Land at nearest suitable airfield

OIL pressure high

- ❖ → On ground during warm up with low oil temperature
 - Reduce power until oil pressure green, continue warm up at reduced power
- ❖ During flight
 - Check oil temperature
 - Check coolant temperature
 - ❖ → If temperatures within green range
 - ⇒ Oil pressure indication may be faulty; watch temperatures
 - ❖ If temperatures outside of green range
 - ⇒ Reduce power;
 - ⇒ Land at nearest suitable airfield, be prepared for engine fail

Oil pressure low

- Refer to **Emergency Checklist page 6**, “OIL PRES”

Oil temperature high

- Refer to **Emergency Checklist page 6**, “OIL TEMP”

Oil temperature low

- Increase power
- Reduce airspeed

Fuel temperature high

- Refer to **Emergency Checklist page 7**, "L/R FUEL TEMP"

FUEL temperature low

- Monitor fuel temperature
 - If fuel temperature decreases to red range ($< -25^{\circ}\text{C}$):
 - ⇒ Increase power
 - ⇒ Reduce airspeed
 - If not returning to yellow range:
 - ⇒ Land at nearest suitable airfield

Coolant temperature high

- Refer to **Emergency Checklist page 6**, "ENG TEMP"

Coolant temperature low

Remark: During low power descent from high altitude coolant temperature may decrease

- Check "COOL LVL" caution light
 - If ON
 - ⇒ Reduce power
 - ⇒ Expect loss of coolant fluid
 - ⇒ Be prepared for engine failure

Gearbox temperature high

- Refer to **Emergency Checklist page 7**, "GBOX TEMP"

Alternator load yellow range

- Switch off unnecessary electrical equipment
 - If indication still outside of green range:
 - ⇒ Land at nearest suitable airfield

Flap failure

- Check flaps visually, recheck all flap switch positions
- Approach speeds with abnormal flap setting:
